

## **Zeiss's statement concerning its provision of multiphoton systems**

1. 'Zeiss has not, in the UK and perhaps also elsewhere, supplied a fully integrated multiphoton system complete with laser. Instead what this report has called full multiphoton systems were shipped without the multiphoton laser, but otherwise complete, for example pre-aligned and interface prepared to receive the MP Laser. In those cases, the customer buys the laser and Zeiss's installation engineers actively liaise with the laser supplier to coordinate installation of the laser.'
2. 'Multiphoton ready systems are systems equipped with sufficient internal architecture that a multiphoton laser could be added in the field in addition to other equipment without the system needing to be returned to the factory. Multiphoton ready systems that are not supplied with a multiphoton laser are fully functional and operating systems for confocal microscopy.'
